

# MAINTENANCE GUIDE

Artificial turf lawns need to be maintained on a regular basis to look and perform at an optimum level. There is a perception that artificial turf lawns are maintenance free, but the reality is they require less maintenance than natural turf lawns.

A crucial tip for maintaining your artificial turf lawn is to do a little, often, rather than neglecting the lawn for a long period of time and being faced with a major maintenance program to restore your artificial turf lawn to its optimum condition. Antitur

**SETTLEMENT:** It will take 2-3 months for your new artificial turf lawn to settle and reach its optimum condition. During this period the infill materials penetrate the fibre pile and settle into the turf structure. Light grooming using a medium soft bristle brush on a regular basis will help the pile remain upright, aid infill settlement and promote the life of the installation.

**BRUSHING:** The main reason for brushing is to stimulate the top fibres of your artificial turf lawn, aiding them to remain vertical. We recommend light brushing at least once every month and actioned in a number of alternate directions.

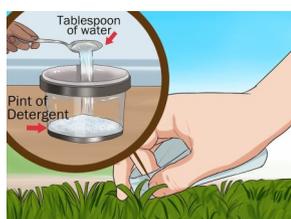

Some infill may appear on the top of your artificial turf lawn from time to time but this only requires light brushing to restore it to the turfs structure.

**DEBRIS:** Debris should be removed from your artificial turf lawn on a regular basis to prevent organic matter building up in the turf structure. We recommend debris removal at least once every week and can be actioned with leaf rake & shovel, leaf collecting device such as Aussie Clean Sweep or mechanical blower. Debris build-up may affect the drainage capabilities of your artificial turf system and encourage weed growth.

**ANIMAL FAECES:** Animal faeces should be removed manually from your artificial turf lawn as soon as you find it and the area washed down with a warm soapy solution such as household washing liquid. The faeces will not damage your artificial turf lawn but will work its way into the artificial turf structure. The longer it is left the harder it will be to remove.

**TREATMENT:** If you follow the foregoing recommendation for debris removal you will dramatically reduce the chance of moss/algae and weeds forming on/in your artificial turf lawn. We recommend moss/weed killing should take place once a year with water-based systematic weed killer:

*Weeds:* Simazine: Is a herbicide of the triazine class. The compound is used to control broad leaf weeds and annual grasses.

*Moss/Algae:* Wet & Forget: It has a unique combination of biodegradable selective surfactants for moss removal, mould removal and gunge removal on any exterior surface.

Please remember to remove all dead matter including roots and sweep debris out of the turf structure.

**STAIN REMOVAL:** Most stains can be removed from your artificial turf lawn with warm soapy water, household grade detergent such as washing liquid, and "elbow grease"!

Heavy oil marks are removed using mineral spirits and a cloth; remembering to wash down the cleaned area with water to dilute the spirit residue.

**BURNS:** For superficial burns in your artificial turf lawn, carefully clip the pile with scissors just below the blackened or melted tips. For large deep burns you may need to replace that section of artificial turf lawn therefore we recommend that you contact your local installer for professional care.

**VEHICLES:** Only light vehicles under 1-ton, fitted with wide, low-pressure tyres (8 to 10psi) should be allowed on your artificial turf lawn.

**TAKE CARE:** You should avoid using/taking the following items onto your artificial turf lawn:

**Glass, tin or ceramics:** Broken, sharp objects can bury themselves into the turf structure and potentially cause injury or damage your artificial turf lawn.

**Cigarettes or hot works:** Although your artificial turf lawn has a fire safety rating, open flames and hot items may melt the fibre pile.

**Chewing gum:** Again this can be removed by freezing the gum and chipping it off the surface, but it is strongly recommended to avoid this situation.

**IMPORTANT NOTICE:** Please be careful of what you put on your . The manufacturers Limited Warranty does not cover damage that is a result of shrinking or melting of fibres due to reflection, sun magnification, or other sources of extreme heat.
